# Xerox® Product Compatibility with Microsoft® Windows® 8.x and 10

Like the fundamental redesign seen in the new user experience, printing has also undergone significant changes in Windows 8. Now, users are offered several choices of driver types—each is tailored for different workflows. The various driver types offer a unique user experience and set of features. With the introduction of Windows 8.1, Xerox continues to advance printing capabilities, adding support for advanced features like PIN based printing (secure print), shared properties across print queues, and updated improved class drivers. The print architecture has not changed between Windows 8.x and Windows 10 and the print drivers options available in Windows 8.x also apply to Windows 10.

Xerox provides extensive support for the various types of Windows 8.x and Windows 10 print drivers. The following table lists Xerox® products and information regarding Windows 8.x and Windows 10 print driver availability. The legend below briefly describes each of the driver types; a more extensive description, as well as helpful information regarding how to obtain, install and use these print drivers can be found at the end of this document. As Xerox releases new Windows 8 and Windows 10 print drivers, we will continue to deliver updated information.

## Legend

Driver Type	Description
Version 4 Drivers	Optimized for Windows 8/10. Provides access to a richer set of features when printing from Modern UI Apps.
Version 3 Drivers	Supports full-featured Desktop printing. Includes support for printing from Modern UI Apps.
Xerox® Global Print Driver®	Xerox® Global Print Driver supports full-featured desktop printing. Includes support for printing from Modern UI Apps. For more information, visit <a href="http://www.xerox.com/global">www.xerox.com/global</a> .
Class Driver	Print driver included in Windows 8/10 that enables basic printing from Modern UI apps and Desktop programs.

# What was new in Windows® 8.x?

## New types of print drivers.

Windows 8 and 8.1 bridge into the world of mobile devices and introduces many new concepts and new ways to print. The new choices and the different ways print drivers now function in classic, legacy Desktop programs and cutting-edge Modern UI apps can be overwhelming and a bit confusing.

While printing from Desktop programs remains a familiar experience, Modern UI apps create new ways of working with Windows and new printing workflows. Microsoft's introduction of a new type of driver, known as the Class Driver, offers a new method of printing with a simpler set of features. With all of these changes, deciding which print driver to use and understanding how the driver works can be difficult. The table below describes each type of print driver and explains the different behaviors to expect.

Driver Type	Printing from Desktop Programs (Microsoft Office)	Printing from a Modern UI App (Internet Explorer®, PDF Viewer)
Version 4 Drivers	Today, V4 drivers have evolved to include the majority of the V3 printing features. When working with advanced printing features, you may want to consider using V3 drivers for printing from Desktop programs, like Microsoft Office applications.	
Version 3 Drivers		Microsoft introduced v4 drivers with Windows 8 to offer a print driver that would function well in both the Desktop and Modern UI environments. V4 drivers offer the best printing experience for Windows 8/10 from Modern UI apps. These drivers provide access to the most features via the Xerox Print Experience app that can be downloaded from the Windows Store.
Xerox® Global Print Driver®	Introduced with Windows 2000, printing with V3 drivers from Desktop applications remains the same as the Windows 7 print experience.	Modern UI apps allow for printing using V3 drivers. The feature set available when printing from a Modern UI app is condensed to maximize use from Windows 8/10 touch-enabled devices.

Class Driver	<p>Class drivers are included with Windows 8.x/10 and Windows RT tablets as a part of the operating system. Because they are immediately available and don't require downloading, class drivers can offer a quick and convenient install experience.</p> <p>Class drivers are available for many newer Xerox® printers and MFPs that offer PS, PCL6 and/or XPS printing capabilities. These drivers offer a basic feature set and the user experience resembles very simple drivers that do not have a customized UI.</p>	<p>Class drivers are included with Windows 8.x/10 and Windows RT tablets as a part of the operating system. Because they are immediately available and don't require downloading, class drivers can offer a quick and convenient install experience. In many cases, the install is so fast you may not even realize that you just installed a print driver. The features offered by the class driver stay the same when printing from Desktop programs or Modern UI apps.</p>
--------------	---	---

### How to obtain print drivers.

To access many of the Windows 8/10 print driver types for your products, visit [www.xerox.com/drivers](http://www.xerox.com/drivers). Search using the name of your product, and select the Drivers & Downloads link from the resulting page. Some print drivers, like the class drivers, can only be obtained through the operating system. Microsoft does not allow us to update existing class drivers or add new class drivers to the operating system and we cannot distribute these drivers from [www.xerox.com/drivers](http://www.xerox.com/drivers). For more information about how this affects Windows RT users, see the section below titled, "Printing in Windows RT". The next table lists each type of print driver and the options available for finding the drivers you need.

Driver Type	Printing from Desktop Programs (Microsoft Office)	Printing from a Modern UI App (Internet Explorer®, PDF Viewer)
Version 4 Drivers	The Xerox Print Experience app, the companion to the V4 driver, is available for download from the Windows Store.	Some of our newest printers and MFPs now have v4 drivers available with support for more products planned over time.
Version 3 Drivers	Not Applicable	You can find updated Windows 8/10 drivers for many Xerox® printers and MFPs at the Support & Drivers site at <a href="http://www.xerox.com/drivers">www.xerox.com/drivers</a> .
Xerox® Global Print Driver®	Not Applicable	You can find an updated version of the Xerox® Global Print Driver that offers support for Windows 8/10 at the Support & Drivers site at <a href="http://www.xerox.com/drivers">www.xerox.com/drivers</a> .
Class Driver	Not Applicable	Not Applicable

## How to install the new types of print drivers.

Windows 8/10 offer two methods of performing print driver installations. When printing from a Modern UI app, an automatic installation of a suitable class driver occurs when you select one of the printers Windows 8/10 automatically detects. If Windows 8/10 does not automatically discover your printers, cannot find a matching class driver for your printer, or if you prefer a driver that offers more features, you can choose to install print drivers from within the Desktop. This section describes the steps for installing print drivers from the Desktop.

### How to Install a Class Driver

1. In Windows 8/10, open the Desktop, touch the top or bottom right corner to open the Charms bar, select Settings and select the Control Panel. In Windows 10, right-click the Start button and select the Control Panel.

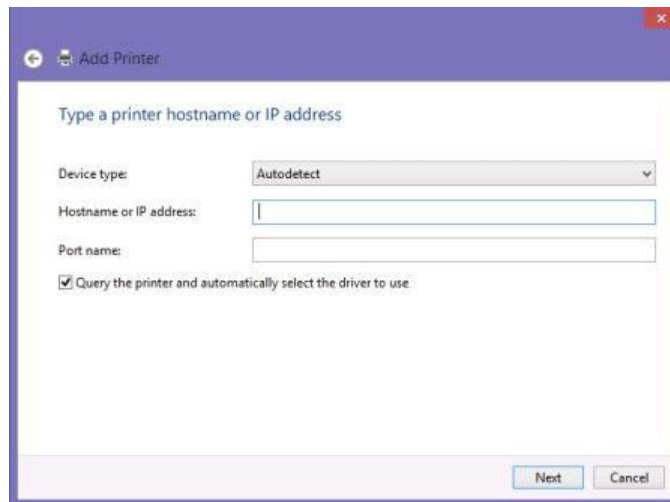

2. Select Devices and Printers.
3. Select “Add a printer.”
4. If the printer you would like to install appears in the list of available printers, select that printer from the list. Otherwise, select “The Printer that I want isn’t listed.”
5. From the “Find a printer by other options” screen, select the “Add a printer using a TCP/IP address or hostname” option and select “Next.”

**Note:** If you have been given other directions to follow by your IT administrator, select the choice that best matches your network configuration. The remaining steps assume that the installation will use a TCP/IP address.

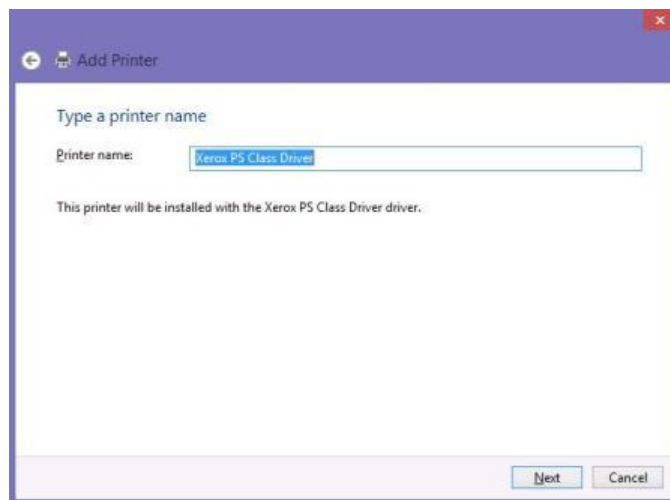

**Helpful Tip:** The configuration report printed during the printer’s power on cycle typically displays the TCP/IP address. Check the user guide for your printer for more information about how to access the configuration report.

6. At the “Type a printer hostname or IP address” screen, enter the IP address of your printer and make sure that the checkbox next to “Query the printer and automatically select the driver to use” remains checked, as illustrated below. Select “Next.”

The screenshot shows the 'Add Printer' window with the title 'Add Printer'. The main heading is 'Type a printer hostname or IP address'. Below this, there are three input fields: 'Device type:' with a dropdown menu set to 'Autodetect', 'Hostname or IP address:' with an empty text box, and 'Port name:' with an empty text box. A checkbox labeled 'Query the printer and automatically select the driver to use' is checked. At the bottom right, there are 'Next' and 'Cancel' buttons.

7. Now, Windows 8/10 will search for a class driver that matches the printer you have chosen. When Windows has found the best class driver to use with your printer, you will see a screen like the one below that describes the selected class driver. At this point, we highly suggest that you change the printer name to something that will be meaningful and help you know which printer you are using. After you have finished typing the new name, select “Next.”

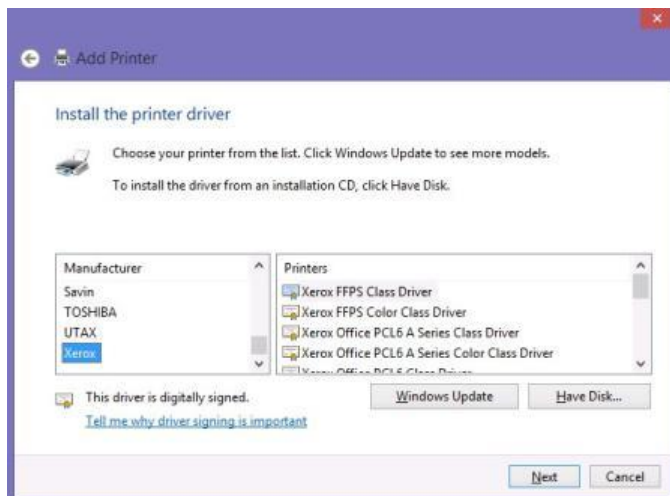

The screenshot shows the 'Add Printer' window with the title 'Add Printer'. The main heading is 'Type a printer name'. Below this, there is a 'Printer name:' label followed by a text box containing 'Xerox PS Class Driver'. Below the text box, it says 'This printer will be installed with the Xerox PS Class Driver driver.' At the bottom right, there are 'Next' and 'Cancel' buttons.

8. At the Printer Sharing screen, you can choose whether to share this printer with others on your network. Make your choices and select “Next.”

You have now completed the installation process! You may choose to Print a Test Page to make sure you can print to the printer or you may choose to select “Finish” and exit out of the install wizard.

**Helpful Tip:** In some network environments, you may observe a lengthy delay before your newly installed printer appears in the list of Devices and Printers. This is a result of background processes and does not mean that your printer has stopped functioning. Your printer is available for printing even when it is not displayed in the list of Devices and Printers.

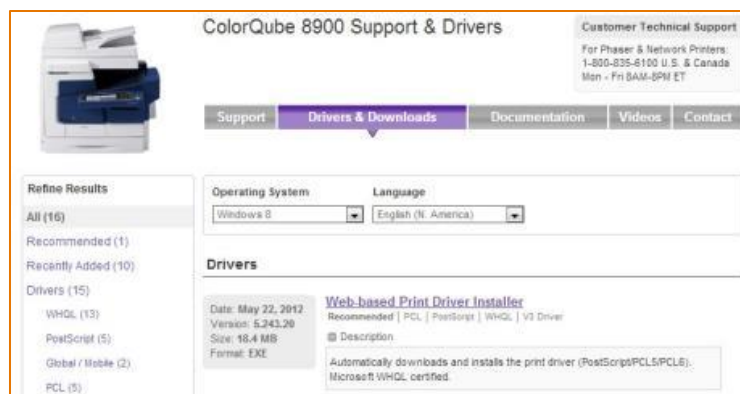

**Helpful Tip:** In some cases, Windows cannot determine the best class driver for your printer. When that happens, you will see a screen like the one below after entering your IP address. This screen lets you select the class driver to use with your printer. Select “Xerox” from the list of manufacturers and select the class driver option that matches the class driver listed for your printer in the compatibility table at the beginning of this document.

## How to Install a Version 3 Driver

To start the V3 driver installation process, first download the driver for your printer from [www.xerox.com/drivers](http://www.xerox.com/drivers). When choosing from the printer driver packages available for your printer, if a Web-based installer package is available that option is recommended since it will greatly simplify the install process.

### Example of Web-based Print Driver Installer for the Xerox® ColorQube® 8900

These installation steps assume the use of the Add Printer Wizard package (usually a self-extracting .zip file that is labeled “PS Driver – Microsoft Certified,” or similar).

1. Open the Desktop, open Internet Explorer® and navigate to [www.xerox.com/drivers](http://www.xerox.com/drivers).
2. Search using the name of your printer and select the Drivers & Downloads link from the resulting page. Select the link for the driver package and respond to the choices below the End User License Agreement. After you click “Accept”, you will see the option to “Run” or “Save”. Select “Run.”

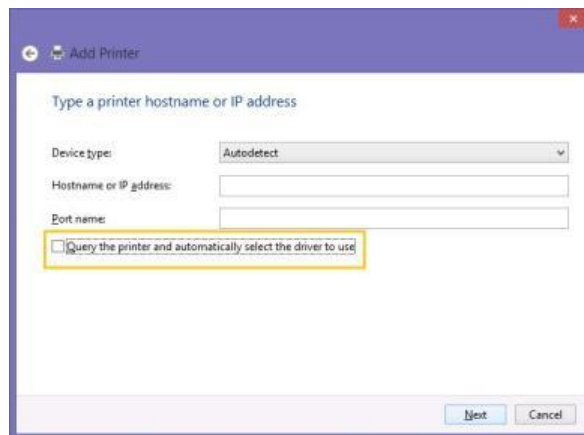

**Helpful Tip:** If you plan to finish the driver install at a later time, you may choose to “Save” the file and open the file later when you wish to resume the installation process.

3. After the download completes, the Xerox software installer will open and will present you with the option of extracting the driver files to a new location. You may either use the default location suggested by the installer or browse to a new location. After you have made your choice, select “Install”.
4. If the printer you would like to install appears in the list of available printers, select that printer from the list. Otherwise, select “The Printer that I want isn’t listed”.
5. From the “Find a printer by other options” screen, select the “Add a printer using a TCP/IP address or hostname” option and select “Next”.

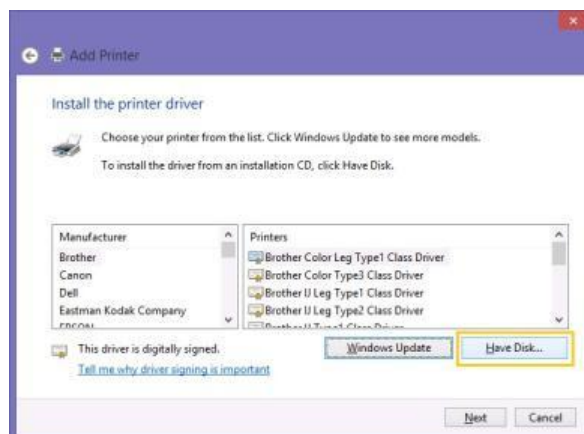

**Note:** If you have been given other directions to follow by your IT administrator, select the choice that best matches your network configuration. The remaining steps assume that the installation will use a TCP/IP address.

**Helpful Tip:** The configuration report printed during the printer's power on cycle typically displays the TCP/IP address. Check the user guide for your printer for more information about how to access the configuration report.

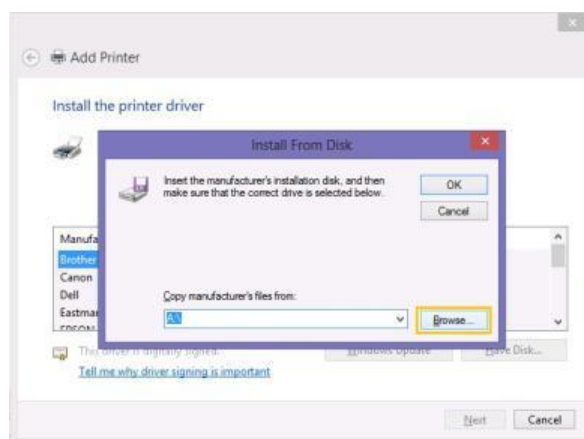

- At the “Type a printer hostname or IP address” screen, enter the IP address of your printer and make sure to remove the checkmark in the checkbox next to “Query the printer and automatically select the driver to use” as illustrated below. Select “Next.”

- At the “Install the printer driver” screen, select “Have Disk.”

- Select the “Browse...” button.

9. Select the .inf file from the list of files and select “Open.” Then, select “OK” at the “Install From Disk” window.
10. The “Install the printer driver” screen should now be updated to display the model of your printer. Select “Next.”

11. You may now choose to select a new name for your printer or keep the model name that displays in the “Type a printer name” screen. Make your choice and select “Next.”
12. If User Account Control is enabled for your installation of Windows 8/10, you may be required to enter an administrator password to proceed with the install. If prompted, enter the administrator password and choose “Yes.”
13. At the Printer Sharing screen, you can choose whether to share this printer with others on your network. Make your choices and select “Next.”
14. You have now completed the installation process! You may choose to “Print a Test Page” to make sure you can print to the printer or you may choose to select “Finish” and exit out of the install wizard.

**Helpful Tip:** In some network environments, you may observe a lengthy delay before your newly installed printer appears in the list of Devices and Printers. This is a result of background processes and does not mean that your printer has stopped functioning. Your printer is available for printing even when it is not displayed in the list of Devices and Printers.

**Helpful Tip:** In some cases, you may find the class driver for your product installed, instead of the V3 driver you selected. If that occurs, simply run through the installation steps again.

## How to Install a Version 4 Driver

For the best install experience, we recommend using the print driver installer we have specially designed for installing V4 drivers and the accompanying Xerox Print Experience Desktop application. The Xerox Print Experience application provides you with a simple, easy to use interface that is quite similar to the look and feel of a V3 driver. Those who prefer access to advanced print driver installation options may choose to use the V4 print driver package we have created for administrators. The following steps assume the use of the V4 Print Driver Installer, which is available for PS, PCL, and XPS V4 drivers.

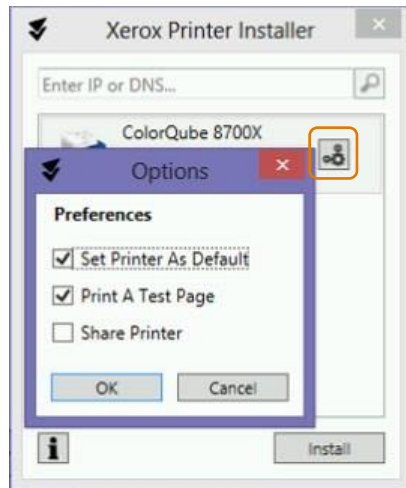

1. Open the Desktop, open Internet Explorer® and navigate to [www.xerox.com/drivers](http://www.xerox.com/drivers).
2. Search using the name of your printer and select the Drivers & Downloads link from the resulting page. Select the link for the driver package and respond to the choices below the End User License Agreement. After you click "Accept", you will see the option to "Run" or "Save". Select "Run."

**Helpful Tip:** If you plan to finish the driver install at a later time, you may choose to "Save" the file and open the file later when you wish to resume the installation process.

3. After the download completes, the Xerox software installer will open and will present you with the option of extracting the driver files to a new location. You may either use the default location suggested by the installer or browse to a new location. After you have made your choice, select "Install".
4. If you are prompted by the User Account Control feature to allow the Xerox Installer Application to make changes to your computer, choose "Yes" to continue with the installation process.
5. Next, the Xerox Printer Installer will display the End User License Agreement. If you agree to the terms and conditions of the license agreement, select "Agree" to continue with the installation process.

6. The Xerox Printer Installer will search your network to find your printer or MFP, if the printer or MFP you are attempting to install appears in the list of results, select that device from the list and select “Install”. Otherwise, you may need to enter the IP Address of the printer or MFP in order to proceed with installation.

**Helpful Tip:** You may customize the installation by selecting the Options button to the right of the selected printer or MFP. When you select the Options button, you will be presented with the following set of choices. Click in the checkbox(es) to make your choices and select “OK” when you have finished.

7. Once the installation process has completed, the Xerox Printer Installer will display a confirmation message similar to the one below.

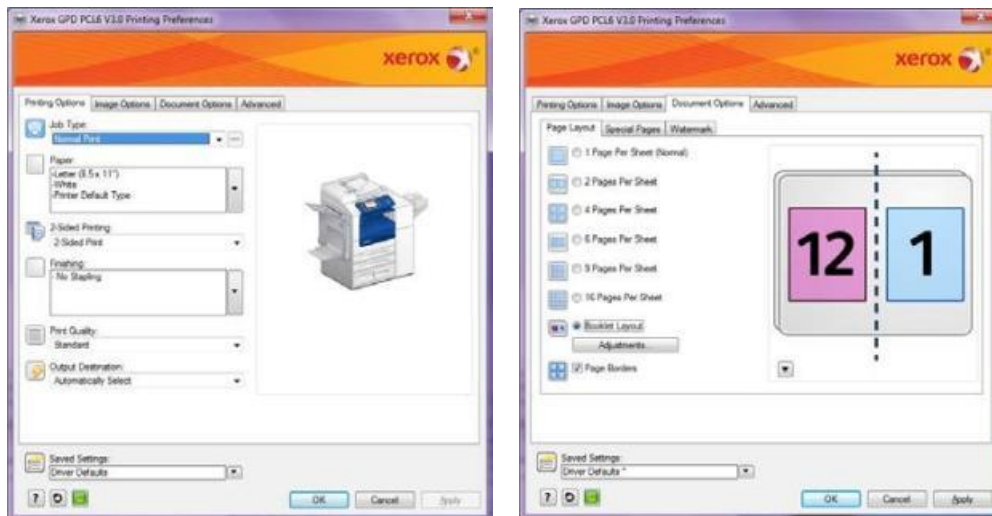

# How to use the new types of print drivers.

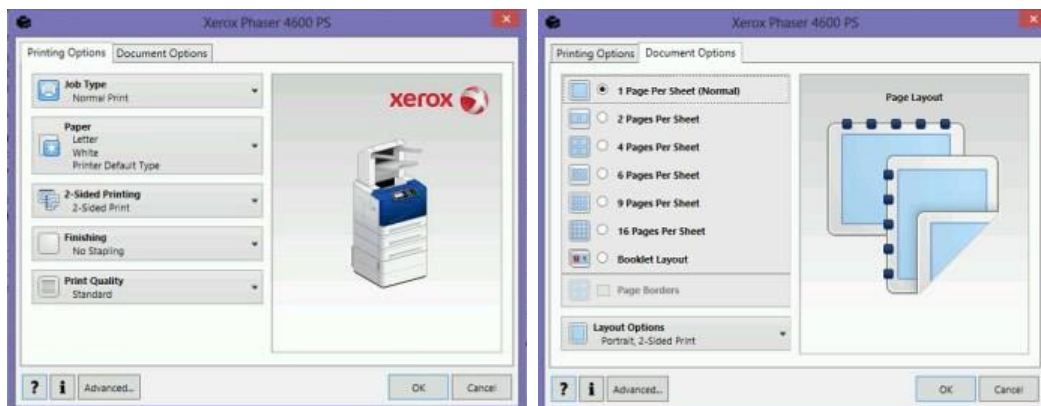

The print driver you select and the application you print from can dramatically alter your Windows 8/10 printing experience. Particularly when printing from Modern UI apps for the first time, you may be surprised by the bold, new printing screens. You may also have a few questions about which of your favorite printing features are still available. These next few sections describe common printing experiences in Windows 8/10. You will also find tables that list the features available when printing in different scenarios.

## How to Print from a Windows® 8/10 Desktop App with a V3 or V4 Driver.

Printing with a V3 driver from a Windows 8/10 Desktop App closely resembles the print experience from Windows 7. Many updated Windows 8 V3 drivers now enjoy a refreshed appearance. While the design has been updated, the function of the driver has not changed. Simply select File, Print or use a keyboard shortcut, like CTRL + P to open the Print dialog. Then, select the Xerox® printer and select Properties to access the print driver options. Finally, select your choice of settings from the print driver options presented and select OK to return to the Print dialog. The following pictures show examples of some of the V3 print driver options you may encounter.

The user interface for V4 drivers has been designed to look very similar to the V3 drivers and the methods for accessing the print driver and making selections are identical.

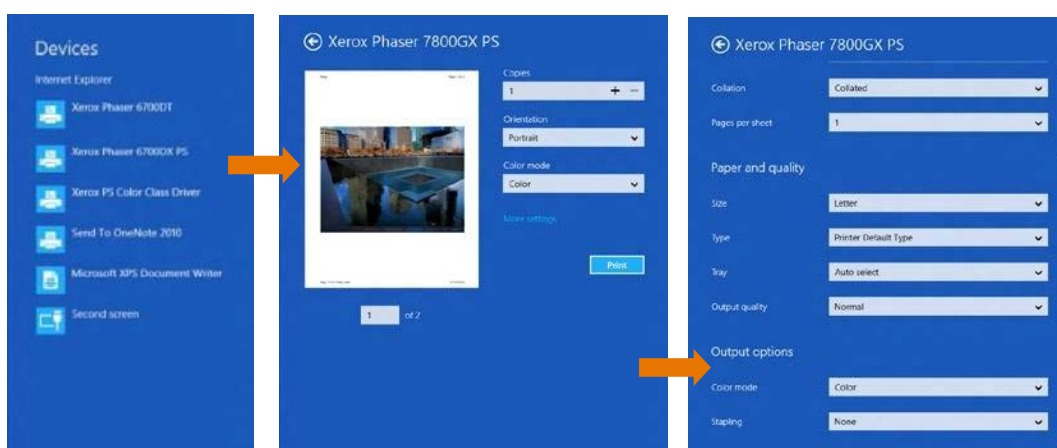

## How to Print from a Windows® 8/10 Modern UI or Universal App with a V4 or V3 Driver.

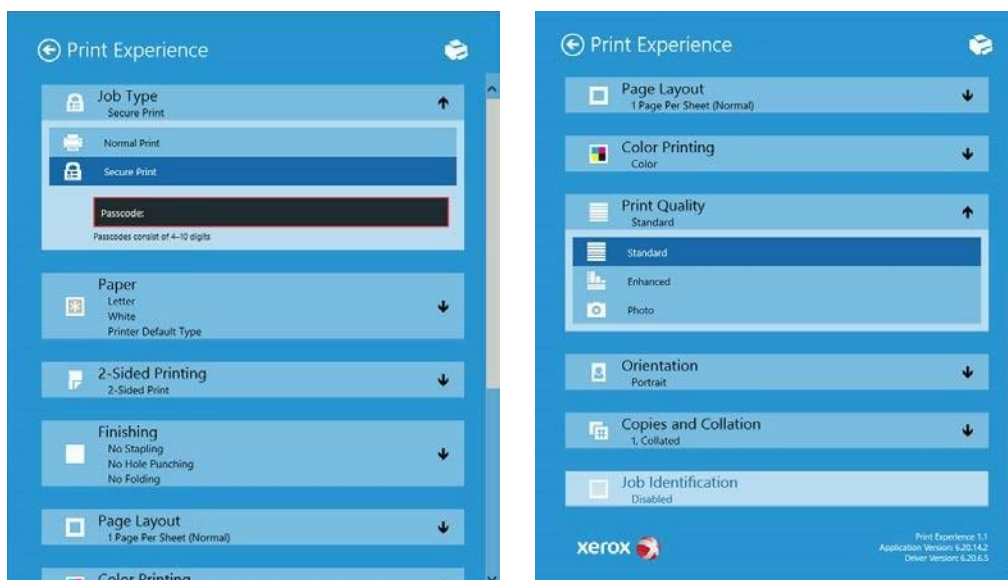

Printing from a Modern UI app differs significantly from the Desktop experience.

1. To start, open the app and press CTRL + P to print.
2. Select the Xerox® product-specific driver or the Xerox® Global Printer Driver®.
3. Select “More Settings” or “Print”.
4. Note that the V3 driver offers fewer printing options for Modern UI or Universal applications while the V4 driver provides a more extensive selection of features
5. Select the back arrow in Windows 8 or Print in Windows 10 to “Print”.

The following pictures provide examples of screens you would encounter when printing from a Windows 8 Modern UI app or a Windows 10 Universal app with a V3 driver.

When printing from a Windows 8 Modern UI app or a Windows 10 Universal app with a V4 driver, you will notice that several features appear after selecting “More Settings”.

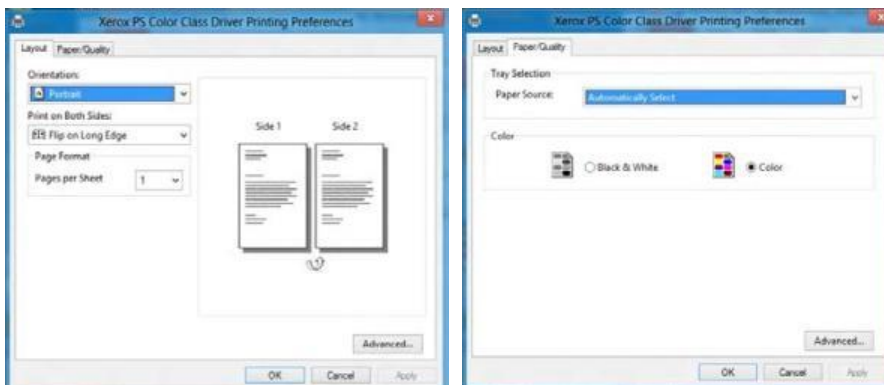

**Helpful Tip:** The richer feature set of the V4 drivers is revealed after installing the Xerox Print Experience app, which is available in the Windows Store.

Version 3 Driver Features Available When Printing from Modern UI Apps	Version 3 Driver Features Not Available When Printing from Modern UI Apps
Duplex	Job Types (including Secure Print)
Copies	Xerox® Accounting
Collation	Watermarks
Color vs. Black & White	Booklet Printing
N-Up	Many Finishing Options (Some stapling choices are supported)
Orientation

Job Types (including Delay Print and Sample Job)	
Watermarks	

## How to print from a Windows® 8/10 Desktop App using a class driver.

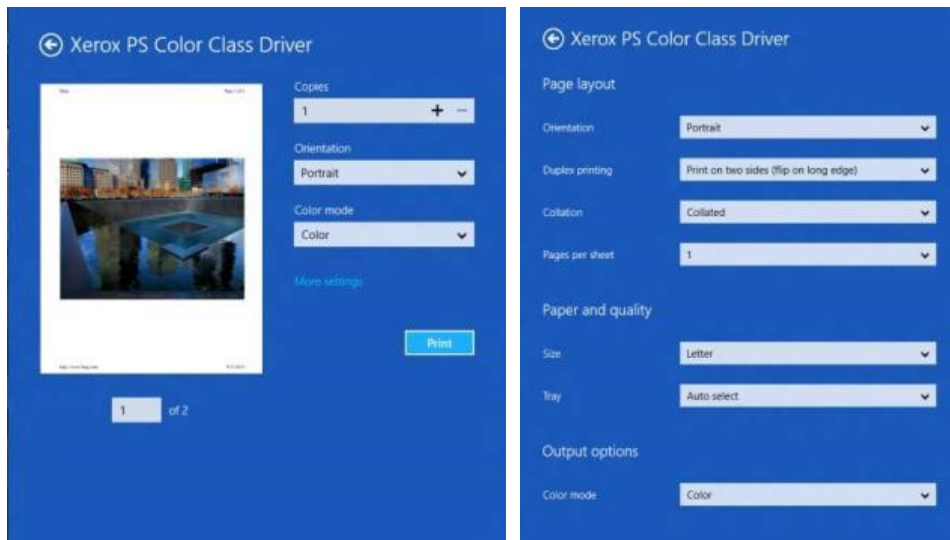

The steps to perform printing from a Windows 8/10 Desktop App when using a class driver are identical to the steps for a V3 driver. The feature set offered is the main difference between the two drivers. Class drivers offer very basic printing options in comparison to a V3 driver, as demonstrated by the pictures below.

## How to print from a Windows® 8 Modern UI App or Windows 10 Universal App using a class driver.

1. To start, open the app select CTRL + P to print.
2. Select the Xerox® Class Driver.
3. Select “More Settings” or “Print.”  
**Note:** The Class Driver offers very limited printing options.
4. Select Print in Windows 10 or the back arrow in Windows 8 to “Print.”

The following pictures show examples of the screens captured in Windows 8 you would encounter when printing using a Xerox® PS Class Driver for Color Printers.

Class Driver: Features Available	Class Driver: Features Not Available
Duplex	Job Types (including Secure Print)
Copies	Xerox® Accounting
Collation	Watermarks
Color vs. Black and White	Booklet Printing
N-Up	Many Finishing Options (Some stapling choices are supported)
Orientation	Media Size and Type Selections
	Paper Tray Options
	Print Quality

## Printing in Windows RT.

Windows RT is a version of Windows 8 intended for use with mobile devices that have lower computing resources. Windows RT is not available for purchase; it ships pre-installed with the mobile device. Microsoft has designed Windows RT to only allow usage of software that ships with the operating system or installs from the Windows Store.

Windows RT restricts printing to the use of the class drivers that are included with the operating system. Windows RT does include Xerox class drivers that enable printing to most Xerox® devices; however, Microsoft does not allow new class drivers to be added or updated in Windows RT or Windows 8. And, we are not able to distribute class drivers via [www.xerox.com/drivers](http://www.xerox.com/drivers). In addition, since Windows RT does not support the use of full-featured V3 drivers, printing choices in Windows RT are very limited in comparison to Windows 8. For robust printing support from Windows RT, you may want to consider the Xerox® Mobile Print Solution. For more information about the Xerox® Mobile Print offering and other mobile solutions, visit [www.xerox.com/mobile](http://www.xerox.com/mobile).

## Xerox and EFI Digital Front Ends

**Background:** Microsoft announced that a Windows 10 upgrade can be performed through Windows Updates starting July 29<sup>th</sup>, 2015. A "Get Windows 10" notification may pop up on servers asking to upgrade to Windows 10 OR your customers may ask questions about Windows 10. First, notify your customers to dismiss the notification. All Xerox digital front ends (e.g. Xerox, EFI) are specifically designed systems combining an operating system, system software, and custom electronics (e.g. acceleration components). As such, servers running Windows XP, Windows 7, Windows 8, etc, will not support the Windows 10 upgrade directly at the server.

**What to do:** Please do not install Windows 10 directly on a Digital Front End / Server. In many industries, such mission critical Windows servers are expected to remain on Windows 7 for some time. Security and other fixes will be supported on current versions of Windows (e.g. Window 7) with all the latest security support continuing through January 14<sup>th</sup>, 2020.

**Customer Client PC's on Windows 10:** For Client PCs with Windows 10, Xerox print drivers will be available to support Windows 10.

**What to do:** Please visit <http://www.xerox.com/about-xerox/prINTER-driver-update/enus.html> to learn more.

# Xerox Support Contact Information

For additional assistance or clarification about the driver compatibility information presented in this document, please contact your local Xerox Customer Support Centre, Xerox Customer Support at 1-800-821-2797 (USA), TTY 1-800-855-2880, or visit [www.support.xerox.com](http://www.support.xerox.com).
